

Bad Attitude Engines Newsletter
www.badattitudeengines.com

We would like to announce the launch of our new website! Our website was designed and built by Racehost.com. These guys are great! Anybody wanting a real professional job should call them. Thanks Trey, Dave and everybody else at RaceHost.com.

With our new website in hand, we have decided to start a newsletter. Since this is our first one, we'll give you some background information on what's going on.

Our 68 Mustang fastback Drag Car (Project Mother F & E), if you've ever stuck one of these motors in a shock tower mustang with a motor plate, lowered and setback, you'll know where the nick name came from!

TomCat is a new customer who bought a motor from us and had us get him all the other parts he needed, headers, electric fans, torque converter, etc.

Mikey is another new customer who brought a lot of his own parts, we machined them up and it's almost done.

Lawnboy (Bill Straitwell) a long time friend, and had one bad ass Camaro, will have an even faster setup soon.

Scott the painter (Scott Robinson), another good friend, looking to go in the nines with a small tire nova.

Blood Brothers Racing (Pat Buckley) real long time friend, killer circle track driver and putting together a multi-car team.

Hartline Airboats, long time customers and great guys.

TomCat picked up his 383 Stroker to install in his 80 Vette street car.

Mikey's 360 Dodge street/strip engine is coming along fine, decided to go with the K.B. flat tops, and found Crane springs to work with Mopar performance cam and magnum style heads. This motor is going in a cordoba and will run on E85 when it makes its way to Florida.

Lawnboy's big block Chevy Stroker crank is still waiting for an engine to go around it.

Scott the painters 400 block is resting comfortably in the corner of the shop, while he gets his nova ready.

We're waiting for Blood Brothers Racing to bring in 3 circle track engine projects.

Hartline Airboats should be bringing in a 500 caddy that ran really lean (clogged fuel filter). Probably stuck some pistons.

Project Mother F & E is almost done, need to check transmission and get updated belts, fire suit, etc.

Just got the new "On the bumper" T-shirts from Jeff at Daytona Sportswear, everything they do is just incredible, these guys are awesome, if you need screen printing or embroidery, give them a call. Check them out on our links page.

Well, that's about it for now - anybody out there, especially all our customers, please send info and pictures of what's going on, and we'll include it in future newsletters.
